GJI 2021 · DOI: 10.1093/gji/ggab017
Not the JGR 2022 temporal models.

Our domain: 23 × 11 × 7 km
Model top: +1.166 km above sea level
Z = source sea-level depth + 1.166 km

Linear interpolation within source triangles and between depth levels.
No extrapolation or background fill.

100 m plotting samples are not 100 m tomographic resolution.
Low-resolvability values are hatched.

Geographic datum is not specified in the source Readme; sea-level compatibility is assumed.
