
Realistic-style synthetic velocity model · 20×8×8 km
(a) Vertical section · Y = 4 km
(b) Vertical section · X = 10 km
(c) Horizontal section · Z = 4 km
Depth (km)
X (km)
Y (km)
V_P (km/s)
Synthetic upper-crustal truth
• Compaction / depth gradient
• Sedimentary basin
• Dipping damaged fault
• Low-Vp alteration lens
• High-Vp intrusive body
• Weak correlated fabric
Dashed: central-plane intersections
Fault thickness ×1 · surface layer ×1
High-Vp centre: X=15, Z=4.8 km
Grid: 100 m · depth positive down
Illustrative geology, not field data
